

MANAGEMENT DISCUSSION AND ANALYSIS

(All amounts are in Canadian dollars)

The following Management's Discussion and Analysis « MD&A » presents results of operations and material changes in financial condition of Rocmec Mining Inc. « Rocmec » and constitutes management's review of various elements that have impacted the company's operational and financial performance for the period ended March 31st, 2010. The following MD&A, dated May 25th, 2010 should be read in conjunction with the company's audited financial statements dated March 31st, 2010 and 2009, including related notes. All amounts included in the following document are in Canadian dollars, unless otherwise stated.

CORPORATE PROFILE

Strategies and objectives

Rocmec's mission and objective over the course of the coming years is to become a gold producer by employing its exclusive thermal fragmentation mining method in narrow-vein deposits, whether it be within its own mining sites, in partnership agreements or sites belonging to other mining companies. Additionally, one other of Rocmec's missions is to introduce its exclusive thermal fragmentation mining method within the mining industry and have this new extraction method recognised around the world.

In order to attain its first objective, Rocmec is continuing exploration work at its Rocmec 1 gold property, pursuing opportunities to acquire properties in Peru and negotiating partnership agreements to exploit narrow-vein deposits with other mining companies.

Rocmec 1

On its Rocmec 1 mining site, located near Rouyn-Noranda in Abitibi, Quebec, Rocmec published a new NI43-101 compliant resource calculation prepared by Group SGS Geostat, however, subsequent to additional diamond drilling an updated report will be published during the third quarter.

In order to increase its exploration possibilities on the Rocmec 1 property, Rocmec, during the past few months acquired additional claims thereby increasing its land holdings by 3,350 hectares. These recent acquisitions will enable the company to expand exploration of known structures and envision different scenarios for future exploitation.

Thermal Fragmentation mining method

In order to attain its objectives laid out in its corporate mission, Rocmec is focussing a portion of its activities on introducing its patented thermal fragmentation mining method to the mining industry.

Mining partnerships

The company conducts work with its method in mining partnerships with mining producers. A first phase is initiated on a few stopes in order for the client to familiarise itself with method, thereafter, a second phase to implement the technology within the rest of the mining complex.

The mining partnership agreements in themselves are a very important element for Rocmec as they generate recurring revenues for the company. The revenue structure of the agreements is based upon sharing the savings obtained by the thermal fragmentation mining method compared to the conventional mining method employed by that particular client. Rocmec receives a fixed amount per linear metre extracted and if necessary, certain agreements contain a clause for a fixed monthly fee.

Strategic alliances

In addition to service contracts, Rocmec aims to enter into strategic alliances with privileged partners that offer mining services to mining producers. Alliances with providers of equipment, products, professional services or others will enable the company to expand recognition of its mining method throughout the industry by way of the networks of its different partners.

Introduction of the technology

Rocmec aims to introduce and have the technology adopted by producers within the industry by presenting the technology at venues organised by the industry, by publishing articles in specialised magazines and other different types of media platforms in order to attain its objective of widespread awareness and recognition of its mining method.

MANAGEMENT DISCUSSION AND ANALYSIS

(All amounts are in Canadian dollars)

Patents

The company owns the exclusive rights to a Canadian patent issued by the Canadian Patent Office. The patent issued to Rocmec International Inc. grants to the company the exclusive rights to utilise its thermal fragmentation technology as per its licensing agreement. The Canadian patent number is 2,495,143. Furthermore the Company owns the rights on following patents:

In order for the company to own the patents, it concluded an agreement enabling it to acquire the totality of the outstanding shares of Rocmec International Inc. The agreement stipulates that in order to acquire the shares Rocmec shall issue to the shareholders of Rocmec International Inc. 85 million common shares of the company. The transaction that was accepted by Rocmec's shareholders at the annual shareholders meeting includes certain conditions related to the service contracts.

Infrastructures: The property includes a 100m deep two-compartment shaft, an 844 metre decline allowing access to three levels (50, 90, 110 and 130 metres). On these levels a total of 2000 metres (drifts and cross-cut drift) were driven. The Rocmec 1 ore body is well defined by diamond drill holes, certain areas were sampled and mined (McDowell vein).

Geology: The mineralization is associated to an East-West sheared system, almost parallel, broken by faults which create slight displacements. Some of the transversal faults are important, causing displacements exceeding 30 metres (ex: El Coco fault). The orientation of the mineralised structures varies from N070° to N090° with a dip of 55° to 80° towards the south. Fractures and tension veins have also developed in close proximity to the sheared zones. They are strongly silicified, very well foliated and are characterized by cataclastic textures with very fine mylonitic grains containing visible or pulverised fragments.

The gold veins on the Rocmec 1 property are quartz-carbonated narrow veins included in an intrusive rock with included quartz or granophyric textures. The narrow veins can be confined in a more competent ground. The high-grade iron ore is most favourable for gold precipitation. These quartz-carbonated narrow veins are normally created in a table and lense shaped structure and are present in the central portion of the sheared zone with a fragile-ductile rocky behaviour parallel to the host structure and slightly oblique. (Hogson, 1989; Poulsen et Robert, 1989).

Since this type of ore body is low in sulphur, the exploration strategy would be oriented towards geological criteria instead of geophysical criteria. It is important to focus on the sheared zones included in the host rock where high-grade iron igneous rock is present. The mapping done by coloured mineralised rock is a simple way to localise the more favourable ore zones.

Mineralization: The gold mineralization at the Rocmec 1 Property is linked to east-northeast, centimetric and metric-wide quartz veins, dipping moderately to steeply to the south, within a kilometre in length by 600 meters wide gabbro to granodiorite intrusive host. There are at least six major vein systems identified on the property; however recent underground work by the Company has confirmed that several veins are likely part of the same system, simply offset by north trending faults. The veins are part of diverging / converging or anastomosing fracture system than includes shearing,

MANAGEMENT DISCUSSION AND ANALYSIS

(All amounts are in Canadian dollars)

alteration (silica, chlorite, sericite, epidote and carbonate) and 2 to 10% disseminated and vein-type pyrite that can attain overall widths in excess of 30 meters.

The best known vein system is termed the McDowell Zone that may include three different vein sets, and has been recognized over a 1,660 meter long strike length, to a 317 meter depth, carrying an average of 6.07 g/t gold capped at 45 g/t over a 0.82 meter horizontal width.

* Calculations are in metric units with results rounded to reflect their true estimated nature. Mineral Resources are not Mineral Reserves, since Mineral Reserves have a demonstrable economic viability. Syst me G ostat International Inc. has verified and is not aware of any environmental, permitting, legal, claim title, taxation, socio-political, marketing or other constraints that could affect the resource estimate.

The resources were estimated with a minimum horizontal width of 0.3m based on the hypothesis of thermal fragmentation mining. This method of mining is designed for narrow vein type mining.

SGS verified and reviewed most of historical analytical data during its first resource estimation of 2007. The same database was used and updated with the recent underground and surfaces drill hole data. SGS considers the historical data as adequate.

The western extension of the McDowell and Talus veins/structures near levels 50, 110 and 130 are still open for exploration and infill drilling. Approximately 150m between the McDowell intersection from the Drill hole RS-02-09 and the west tern extension of the level 90 are still available for infill drilling.

The project needs more definition diamond drilling especially over the (Boucher and Boucher 2 structures) before being ready for mining; this can be realized from surface drilling or by underground by existing rehabilitated drifts. A proposed first phase surface diamond drilling program is estimated at 2000m for a total of 200 000 CAD\$. This does not include additional costs such as lodging, transport and meals.

The Rocmec 1 mineral deposit holds sufficient resources to justify additional work on the property including exploration and infill drilling that could lead to a preliminary economic study especially over the Boucher and Boucher 2 Structures. Rocmec should focus on the increase as well as the upgrade of its resources.

Denain,

The property is located in Louvicourt, in close proximity to Val-d'Or, is one of the sites on which the company undertook development work in order to evaluate its future potential. The principal vein, referred to as the South vein, has been intercepted on close to 400 metres in length, and identified to a depth of 100 metres. The technical report prepared by a consulting geologist reports measured and indicated resources of 9,570 ounces and inferred resources of 31,185 ounces. Furthermore, another mineralized structure, referred to as the north vein, has been identified but as of yet no resource calculation has been made. The company, Texas T. Minerals Inc. holds a 15% interest in the property.

Courville-Maruska,

For the moment this is at the exploration stage. Very little work is planned for this property during the coming year and Management have not determined when exploration activities will take place.

MANAGEMENT DISCUSSION AND ANALYSIS

(All amounts are in Canadian dollars)

Summary of quarterly activities

During the quarter, the business activities focused primarily on continuing exploration work at its Rocmec 1 site and on acquiring financing for the work planned in the coming year. A qualified firm, SGS Géostat Ltd. produced a final report pertaining to the bulk sampling conducted on the property. In order to implement the report's recommendations, diamond drilling was conducted on the property. A total of 14 diamond drill holes totalling 2016 metres targeting the Boucher structure were completed and all the drill holes intercepted the structure. Considering the important quantity of data generated by the drill programme, an updated NI43-101 compliant report dated May 19th, 2010 was published following the first publication dated April 15th, 2010.

During the quarter, Rocmec acquired 99 additional mining claims from Dasserat Resources Inc. The mining claims are adjacent to the 11 mining claims currently owned by Rocmec, on which it's Rocmec 1 gold property is located. These acquisitions increase the total surface area of the Rocmec 1 gold property from 83 hectares to 3,454 hectares. A large number of the newly acquired mining claims have the same orientation whether in continuity or at depth with known gold structures at Rocmec 1. The fact of significantly increasing the size of the property also increases the chances of discovering new mineralised structures.

During the second quarter, Rocmec sold the Montauban property for \$200,000.

Mining partnerships

Accounting of the financial results for the quarter states revenues from service contacts of \$364,881. Direct costs totalled \$529,083 for gross lost of \$164,202.

Nevada

For the mining partnerships in Nevada, Rocmec completed the service contract at Newmont's Midas mine. Newmont is currently preparing a report pertaining to the thermal fragmentation work conducted; results of the report will enable both parties to decide on the next steps. Newmont's project manager is very satisfied with the thermal fragmentation work conducted at the Midas property.

During the quarter, Rocmec completed the thermal fragmentation work at Great Basin Gold's Hollister property and the client has requested a service offer that would include mine development, extraction and mucking for targeted sectors of the mine. Information relative to their request should be available over the course of the coming weeks in order for Rocmec to prepare its service offer.

Mexico

Regarding the contract in Mexico, Rocmec has demobilised its equipment and is currently waiting for further developments pertaining to their relationship.

Canada

During the quarter, Rocmec initiated extraction work at Goldcorp's Porcupine Mine, located in Timmins, Ontario. The agreement called for enlarging pilot holes by way of thermal fragmentation to dimensions of 50 cm or more in order to evaluate the potential of this type of mining method. Work was completed during the current quarter and Rocmec will re-evaluate its approach with the company.

MANAGEMENT DISCUSSION AND ANALYSIS

(All amounts are in Canadian dollars)

FINANCIAL ASPECTS

The preparation of financial statements requires the usage of estimates and the formulation of assumptions that effect reported amounts of revenues and expenses and also the amounts of assets and liabilities. Elements reported in the financial statements that require accrued usage of estimates include the calculation of the useful life of assets, amortisation calculations, calculations pertaining to maintenance obligations for out of service assets and those related to income taxes on profits and future mining income taxes. Consequently, actual results could differ from these estimates.

Summary of second quarter 2010 financial results

Income from contracts

The income from contracts is derived from leasing and work done for other mining companies using the thermal fragmentation mining method. During the period, the company recorded \$364,881 in contract income.

Contract expenses

The contract expenses are comprised of direct costs related to the contracts, principally labour, travelling and lodging. They also include start-up and equipment mobilisation costs. During the quarter, the company recorded an amount of \$529,083 in contract expenses

General and administration expenses

Expenses related to administrative salaries, professional fees, legal expenses, communications, travelling and other office expenses. The remaining general and administration expenses are \$78,965, lower in comparison to same period last year. Details of G & A expenses are listed in the interim financial statements filed with Sedar.

Interest and bank charges

Interest on debentures, the loan secured by a modular treatment plant and other loans represent an important portion of the interest expenses. During the period, interest and bank charges decreased by \$53,850 over the same period last year. A significant portion is attributed to the financing costs related to the modular treatment plant.

Financing Fees

Financing fees represent costs relating to financing activities on loans, debentures and equity financing. During the period, financing fees totalled \$21,000 compared to \$63,605 over the same period last year.

Write-off of deferred exploration and development costs

The write-off of deferred exploration and development costs represent costs expended on properties that the company has no intention of conducting further exploration activities. The company considers that no permanent value loss should be recorded for its Rocmec 1 property.

Results of operations

For the period ended March 31st, 2010, operating expenses totalled \$507,125 compared to \$655,277, a decrease of \$148,152 over the same period last year.

For the period ended March 31st, 2010, the company recorded a net profit of \$761,099 or \$0.003 per share compared to a net profit of \$147,680 or \$0.001 per share for the same period last year. The earning per share was calculated based on 233,189,419 common shares representing the weighted average outstanding common shares as of March 31st, 2010, compared to 149,934,736 shares representing the weighted average outstanding common shares as of March 31st, 2009.

Liquidity and financial condition

Liquidity

At March 31st, 2010, the company had a bank position of \$17,759 that was set aside for development and exploration expenditures, compared to a bank position of \$70,084 at the same period last year.

Tax credit receivable

Tax credit receivables total \$808,095, compared to \$1,389,907 for the same period last year. At March 31st, 2010, the amount includes a mining rights tax credit for 2007 and 2008 of \$808,095.

Fixed assets

During the period, the company acquired equipment totalling \$64,622 compared to \$383,857 for the same period last year. These acquisitions consist primarily of equipment needed for operations pertaining to service contracts.

Mining properties

During the period, the Company invested \$664,359 in deferred exploration compared to \$1,270,804 for the same period last year. These investments have been made principally on the Rocmec 1 property. The Company continues to develop this property and it plans on continuing to invest in the property during the next period.

Assets

As at March 31st, 2010, the company's assets totalled \$26,877,146 an increase of \$3,817,535 compared to March 31st, 2009

Cash flow insufficiency

As of March 31st, 2010, the company faces a cash flow insufficiency. In order to rectify the situation a series of financings were completed after the end of the quarter. Additionally, the company successfully renegotiated the terms of loans and debentures having short term maturity dates.

MANAGEMENT DISCUSSION AND ANALYSIS

(All amounts are in Canadian dollars)

Income taxes on profits and future income taxes

Note that the income taxes on profits and future income taxes have been accounted for as both assets and liabilities; the reason being that the amounts originate from different tax levels such as: federal, provincial and mining income taxes.

Off-balance sheet arrangements

The company has no off-balance sheet arrangements.

Related party transactions

The company has no related party transaction.

Accounting changes

Amortization of property, plant and equipment

On October 1st, 2008, the Company modified its manner of amortizing property, plant and equipment from the diminishing balance method to the straight-line method. The adoption of this new method of amortizing property, plant and equipment was applied prospectively and decreased the amortization expense in the statement of earnings by \$2,964, increased deferred exploration and development charges by \$82,311, decreased property, plant and equipment of \$79,347 and increased shareholders' equity by \$2,964. The implementation of the new accounting method of amortizing property, plant and equipment did not have a significant impact on the basic and diluted net loss per share.

Going concern

In June 2007, The Canadian Institute of Chartered Accountants modified section 1400, "General standards of financial statements presentation", in order to require of the management the assessment of the capacity of the Company to continue its operations over at least, but not limited to, a period of 12 months, from the balance sheet date. These new requirements come into force for the fiscal periods from January 1, 2008 and the Company applied them on October 1, 2008. The new requirements only address disclosures and have no impact on the Company's financial results.

Goodwill and Other Intangible Assets

In February 2008, the Canadian Institute of Chartered Accountants published new Section 3064, "Goodwill and Intangible Assets", to replace Section 3062, "Goodwill and Other Intangible Assets". Publication of this new section resulted, in particular, in the withdrawal of Section 3450, "Research and Development Costs", and Emerging Issues Committee Abstract of Issue Discussed EIC-27, "Revenues and Expenditures During the Pre-operating Period", as well as number of amendments to Section 1000, "Financial Statement Concepts", to clarify the criteria for recognition of assets, and Accounting Guideline AcG-11 "Enterprises in the Development Stage".

The new section establishes standards for the recognition, measurement, presentation and disclosure of goodwill and intangible assets by profit-oriented enterprises. It clarifies the recognition of intangible assets and deals with the recognition of internally generated intangible assets. However, the standards relating to goodwill are identical to those in Section 3062. This new section is effective for fiscal years beginning on or after October 1, 2008 and the Company has implemented it as of that date. The implementation of this standard has no impact on the Company's financial results.

Mining Explorations Costs

On March 27, 2009, the Emerging Issues Committee issued EIC-174, mining exploration costs, to provide additional guidance for mining exploration enterprises on when an impairment test is required. This Abstract must be applied to financial statements issued after March 27, 2009. The adoption of this Abstract had no impact on the financial statements of the company.

Future accounting standard

International Financial Reporting Standards ("IFRS") In February 2008, the Canadian Accounting Standards Board ("AcSB") confirmed January 1, 2011 as the changeover date to move financial reporting for Canadian publicly accountable enterprises to the International Financial Reporting Standards ("IFRSs"). The company is currently evaluating the impact on its financial statements.

IFRS Convergence

In February 2008, the Canadian Accounting Standards Board confirmed January 1, 2011 as the changeover date to move financial reporting for Canadian publicly accountable enterprises to the International Financial Reporting Standards ("IFRS"). The changeover date for the Company will be December 31st, 2011, to be in line with its September year end.

MANAGEMENT DISCUSSION AND ANALYSIS

(All amounts are in Canadian dollars)

Team

Considering the size of the company, the chief financial officer, who is a Chartered Accountant, will supervise the IFRS convergence and will report to the Audit Committee on the progress accomplished.

Ongoing training

Since the fall 2008, the company's CFO attended several training sessions given by the Quebec Order of Chartered Accountants and the IFRS Task Force of RCGT (the auditor of the Company) pertaining to the new IFRS international standards and their application. These training sessions have enabled the company's CFO to familiarise himself with the new standards, whether it be comparing the Canadian GAAP to IFRS, its application within the mining industry, the changes on the date of passage and the modes of presentation.

Accounting Policies impacted

The detailed analysis of the accounting policies impacted by the IFRS convergence is expected to be completed throughout 2010. Overall, a lot of effort will be put in the financial statements presentation as IFRS requires more disclosure. Based on the analysis of expected accounting differences conducted so far, following is a non-exhaustive list of the IFRS accounting policies that could have a potential impact on the financial statements of the Company.

First Time adoption (IFRS 1)

IFRS 1 provides guidance to entities on the general approach to be taken when first adopting IFRS. The underlying principle of IFRS 1 is retrospective application of IFRS standards in force at the date an entity first reports using IFRS.

IFRS 1 acknowledges that full retrospective application may not be practical or appropriate in all situations and prescribes:

- Optional exemptions from specific aspects of certain IFRS standards in the preparation of the Company's opening balance sheet: and
- Mandatory exceptions to retrospective application of certain IFRS standards.

Additionally, to ensure financial statements contain high-quality information that is transparent to users, IFRS 1 contains disclosure requirements to highlight changes made to financial statement items due to the transition to IFRS.

Impairment (IAS 36, IAS36)

IFRS required the use of a one-step impairment test (impairment testing is performed using discounted cash flows) rather than the two-step under Canadian GAAP (using undiscounted cash flow as a trigger to identify potential impairment loss). IFRS requires reversal of impairment losses (excluding goodwill) where previous adverse circumstances have changed; this is prohibited under Canadian GAAP.

Impairment testing should be performed at the asset level for long-lived assets and intangible assets. Where the recoverable amount cannot be estimated for individual assets, it should be estimated as part of a Cash Generating Unit ("CGU").

Share-based payments (IFRS 2)

Per IFRS, the forfeiture rate, with respect to share options, needs to be estimated by the Company at the grant date instead of recognizing the entire compensation expense and only record actual forfeitures as they occur. For graded-vesting features, IFRS requires each instalment to be treated as a separate share option grant, because each instalment has a different vesting period and hence the fair value of each instalment will differ.

Mineral property interest, exploration and evaluation costs (IFRS 6)

Under IFRS, the Company would be required to develop an accounting policy to specifically and consistently identify which expenditures on exploration and evaluation activities will be recorded as assets. Unlike IFRS, Canadian GAAP indicates that exploration costs may initially be capitalized if the Company considers that such costs have the characteristics of property, plant and equipment. Exploration and evaluation assets shall be classified as either tangible or intangible according to the nature of the assets acquired.

Information systems

The accounting processes of the Company are simple since it is still at the exploration stage and no major challenges are expected at this point to operate the accounting system under the IFRS. Nevertheless, some excel spreadsheets will probably have to be adapted to support the change made in accounting policies. The Company has yet to establish if historical data will have to be regenerated to comply with some of the choices to be made under IFRS 1. As the Company will perform its accounting under Canadian GAAP from October 2010 to September 2011, it has yet to determine how it will generate in parallel the accounting under IFRS so that in 2011-12 it has the comparative available. Once the extent of the

MANAGEMENT DISCUSSION AND ANALYSIS

(All amounts are in Canadian dollars)

adjustments needed to convert to IFRS will be established, processes will be put in place effective October 2010 to generate the dual accounting.

Internal Controls

Since the Company is a TSX Venture issuer, management does not make representations relating to the establishment and maintenance of disclosure controls and procedures and internal control over financial reporting, as defined in National 52-109. Management is responsible for ensuring that processes are in place to provide them with sufficient knowledge to support their certification of the financial statements and MD&A, more specifically assessing that the SEDAR filings are presenting fairly the results of the Company. Management will make sure that once the convergence process is completed, it can still certify its filings.

Impact on the business

The business processes of the Company are simple and no major challenges are expected at this point to operate under IFRS. The Company has no foreign currency transactions, no hedging activities, no debt and no capital obligations. The Company doesn't expect that IFRS will have an impact on the requirements or business processes when it enters in flow-through financing. The Company has no compensation arrangements that will be affected by the IFRS implementation. The Company's Stock Option Plan is not affected by ratios or financial targets.

RISKS AND UNCERTAINTIES

Financial Risks

An important part of the company's activities may be considered as exploration. It must regularly obtain financing in order to continue its exploration activities and development. Despite the fact that the company has been successful in the past, there is no guarantee that they will succeed in the future.

All of the company's properties are at the exploration and development stage. The long-term profitability of the company's operations will be in part directly related to the cost and success of its exploration and subsequent development programmes, which may be affected by a number of factors. These include the quantity and quality of the ore, the cost to develop infrastructure for production, the financing costs, as well as the market price of gold.

Environmental risks

The company is subject to different environmental incidents that may occur during exploration or development work. Management has implemented programs to manage the risks involved, which include various plans and operational practices.

Flow-through shares

The company is partly financed by the issuance of flow-through shares. However, there is no guarantee that the funds expended by the company will qualify as Canadian exploration charges, even if the company has taken all the necessary measures for this purpose.

Dividend policy

Since the date of incorporation, the company has not declared nor paid a dividend on its common shares. All decisions pertaining to the payment of dividends to holders of common shares shall be the responsibility of the Board of Directors and will be based on the financial situation of the company, its funding requirements to insure future growth and any other pertinent factor given the circumstances.

Evaluation and effectiveness of disclosure controls and procedures

The Company has established and maintains disclosure controls and procedures over financial reporting. The certifying officers have evaluated the effectiveness of the issuer's disclosure controls and procedures as of September 30, 2009 and have concluded that such procedures are adequate and effective to ensure accurate and complete disclosures in annual filings.

Forward-looking statements

This Management's Discussion and Analysis contains forward-looking statements that include risks and uncertainties. When used in this Report, the words "estimate," "project," "anticipate," "expect," "intend," "believe," "hope," "may" and similar expressions, as well as "will," "shall" and other indications of future tense, are intended to identify forward-looking statements. The forward-looking statements are based on current expectations and apply only as of the date on which they were made. These forward-looking statements involve risks, uncertainties and other factors that in some cases have

Rocmec Mining Inc. – Second quarter ended – March 31, 2010

MANAGEMENT DISCUSSION AND ANALYSIS

(All amounts are in Canadian dollars)

affected our historical results and could cause actual results in the future to differ significantly from the results anticipated in forward-looking statements made in this Report. Important factors that could cause such a difference are discussed in this Report, particularly in the sections entitled "Risks and uncertainties". You are cautioned not to place undue reliance on the forward-looking statements.

The factors that could cause actual results to differ materially from those indicated in such forward-looking statements include the grade of ore mined and unforeseen difficulties in mining operations that could affect revenues and production costs. Other factors, such as uncertainties regarding government regulations, could also affect the results. We undertake no obligation to update or revise our forward-looking statements, whether as a result of new information, future events or otherwise.

Other information

The discussion and analysis of the interim financial results as of March 31st, 2010 should be read in conjunction with the company's annual audited financial statements for the period ended September 30, 2009 and 2008. Additional information may be obtained from the company filings on the following website www.sedar.com in the documents filed by the Company.
